PROFESSIONAL SUMMARY

Results-driven Cybersecurity Analyst and SOC Professional with experience in threat detection, incident response, threat hunting, vulnerability management, endpoint security, cloud security, and AI security. Skilled in Wazuh, Security Onion, Microsoft Defender for Endpoint, Nessus, Qualys, Wireshark, Nmap, OWASP ZAP, Python, and FastAPI. Experienced in IOC analysis, MITRE ATT&CK mapping, phishing investigations, ransomware investigations, PowerShell attack analysis, remediation tracking, and security monitoring. Designed and developed an AI Security & Threat Detection Platform featuring prompt injection detection, behavioral threat analytics, malware-like behavior detection, phishing detection, threat intelligence integration, automated response, and centralized logging.

KEY ACHIEVEMENTS

- Built an AI Security & Threat Detection Platform.
- Conducted 10+ vulnerability assessments and remediation reviews.
- Investigated phishing, ransomware, and PowerShell-based attack scenarios.
- Supported 300+ enterprise users while maintaining operational uptime and security compliance.
- Reduced IT support response times by 75% through process improvements.
- Remediated Google Compute Engine Security Vulnerabilities

CERTIFICATIONS

- CompTIA SecAI+
- ISC2 Certified in Cybersecurity (CC)
- Cisco CyberOps Associate
- Google Cloud Cybersecurity Professional Certificate
- Google IT Support Professional Certificate

CORE COMPETENCIES

SOC Operations, Threat Hunting, Incident Response, Threat Detection Engineering, IOC Analysis, MITRE ATT&CK Mapping, Vulnerability Management, Security Monitoring, Endpoint Security, Cloud Security, API Security, Threat Intelligence, Risk Assessment, Detection & Response.

TECHNICAL SKILLS

Cloud Security: Google Cloud Platform (GCP), IAM, Firewall Hardening, Storage Security, Compute Engine Security

Endpoint Security: Microsoft Defender for Endpoint, OPSWAT MetaDefender, ManageEngine

Vulnerability Management: Nessus, Qualys, OWASP ZAP

SIEM: Wazuh, Security Onion, Splunk [Lab]

Network Security: Wireshark, Nmap

Application Security: Snyk, Aikido, Wallarm

Programming & Security Automation:

- Python (Security Automation)
- FastAPI
- Security Tool Development
- API Security

PROFESSIONAL EXPERIENCE

IT Support Officer | Sterling Oil (SEPCO) | May 2024 – Present

- Support 300+ enterprise users across business-critical environments.
- Collaborate with infrastructure teams to improve resilience and uptime.
- Assist with vulnerability reduction and security compliance initiatives.
- Perform patch management, system hardening, access management, and endpoint security support.

Cybersecurity Engineering Intern (Remote Consultant) | Hagital Consulting | Jan 2025 – Apr 2026

- Conducted vulnerability assessments using Nessus and Qualys.
- Performed API and web application security reviews.
- Produced remediation recommendations and executive security reports.
- Supported cloud security and risk reduction initiatives.

SOC Analyst | Cyber & Forensics Security Solutions | Nov 2023 – May 2024

- Monitored and investigated alerts using Wazuh and Security Onion.
- Performed threat hunting, IOC validation, incident triage, and log correlation.
- Mapped threats to the MITRE ATT&CK framework.
- Investigated phishing, ransomware, PowerShell abuse, and suspicious authentication events.
- Prepared incident reports and supported containment and remediation efforts.

Senior IT Support Officer | Capitol Hill Hospitals | Jan 2021 – Nov 2023

- Managed IT infrastructure and endpoint systems.
- Implemented a ticketing workflow that reduced response times by 75%.
- Supported system administration, onboarding, troubleshooting, and business continuity.
- Reduced cable clutter by approximately 90%, improving infrastructure organization, maintainability.

FLAGSHIP CYBERSECURITY PROJECT [AI Security & Threat Detection Platform | Python, FastAPI]

- Designed and developed a multi-layer AI Security & Threat Detection Platform.
- Implemented JWT authentication, prompt injection detection, rate limiting, and PII masking.
- Built behavioral threat detection using failed logins, IP anomalies, and sensitive endpoint monitoring.
- Developed phishing detection with SPF, DKIM, DMARC, URL analysis, and spoofed sender detection.
- Integrated VirusTotal threat intelligence enrichment.
- Engineered malware-like behavior detection for credential dumping, suspicious PowerShell execution, ransomware behavior, privilege escalation, persistence creation, and C2 communications.
- Implemented centralized logging and automated blocking of high-risk activities.
- Integrated behavioral threat scoring using failed login analysis, IP anomaly detection, and sensitive endpoint monitoring.

ADDITIONAL PROJECT

Phishing Email Investigation & IOC Analysis – Investigated phishing emails, analyzed indicators of compromise (IOCs), identified malicious URLs and spoofed domains, and documented findings to support incident response activities.

Ransomware Investigation – Analyzed ransomware attack indicators, reviewed system artifacts, identified malicious behaviors, and documented findings to support containment and recovery efforts.

Advanced PowerShell Exploitation Detection – Investigated suspicious PowerShell activities, analyzed attacker techniques, and identified indicators associated with post-exploitation and malicious script execution.

Wazuh SIEM Deployment & Use Cases – Installed, configured, and optimized Wazuh SIEM for security monitoring, alert management, log analysis, threat detection, and incident investigation. Developed practical use cases to improve threat visibility.

Endpoint Security Lab (OPSWAT MetaDefender) – Configured malware detection, data loss prevention (DLP), application control, and device control policies to strengthen endpoint security and reduce organizational risk.

EDUCATION

B.Sc Physics/Electronics | University of Port Harcourt
